Introduction

The Survey

The General Practice Assessment Questionnaire (GPAQ) surveys how patients perceive their doctor's practice. The survey covers aspects of quality best assessed by asking patients, and most highly valued by patients.

Survey Development

GPAQ was introduced in 2004. This version, GPAQ-R2 (piloted as GPAQ V4), was revised (2012) to encompass GP Revalidation, and the Directed Enhanced Service (DES) for Patient Participation which includes collecting patients' views through a local survey. GPAQ-R2 now includes the Friends and Family Test (Q41).

This Report

For each question, a summary of how many patients responded to each answer within each question is given.

A Note about Numbers /Subtotals

Total figures include those who did not answer the question about sex or age. Therefore where subtotals are given for the split between males and females, and similarly those under and over 45, these may add up to less than figures in the total column.

Benchmarks

Benchmarks are averages, and as such should be treated with caution and in context.

For questions identical, or nearly identical to questions in the GPPS survey, April 2010-March 2011 GPPS national benchmarks (as percentages) are given - as best possible - in a column to the right of your practice results, highlighted in green.

In addition, we have benchmarks from 17,000 questionnaires collected for GPAQ V4, These are given, again as percentages, highlighted in this 'biscuit' colour. For the questions identical to questions in the GPPS national survey, practices may wish to benchmark their results against those from the national survey, for which the numbers collected are much greater.

The table at the end of this report (p22) gives your practice benchmarks together with National Benchmarks from the 17,000 completed questionnaires from piloting GPAQ-R (piloted as GPAQ V4).

Friends and Family Test
Results are given on page 21.

Taking Action on Results

GPAQ has been designed for scores to be used to improve care in your practice. The questions are not vague or general. They relate to specific aspects of care where there is clearly something to be done, if the practice judges that improvement is needed. More information is given in the booklet **"Improving your practice with patient surveys"** which can be downloaded from the GPAQ website:
http://www.phpc.cam.ac.uk/gpaq/files/2014/07/patientsurveyhandbook.pdf

How the Survey was carried out

GPAQ-R2 questionnaires were given out to patients after they had seen the GP.

Q41 How likely to recommend to Friends & Family?

- Extremely likely
- Likely
- Neither likely nor unlikely
- Unlikely
- Extremely unlikely
- Don't know

186 of the 203 patients who completed the questionnaire answered this question.

The scoring methodology is based on the underlying 'Net Promoter Score' calculation, which was considered to be the most effective at delivering the benefits of the Friends and Family Test calculated as follows to give a score between -100 and +100:

https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/214941/Friends-and-Family-Test-Publication-Guidance-v2-FOR-PUBLIC_E2_80_A6.pdf
Proportion of respondants "extremely likely" to recommend	minus	Proportion of respondants "neither likely nor unlikely", "unlikely" or "extremely unlikely" to recommend

Giving a score of **85.4** for your practice overall.

The FFT score for Sample Surgery is **85.4** based on **186** responses

However, following a review, NHS England recommended (http://www.england.nhs.uk/ourwork/pe/fft/calculations/) a move away from the Net Promoter Score (NPS) and the introduction of a simpler scoring system in order to increase the relevance of the FFT data.

Based on the findings of the review, NHS England is now calculating and presenting the FFT results as a percentage of respondents who would/would not recommend the service to their friends and family.

Q41 FFT	Total Number responses	% of total
